

Report of Core Curriculum committee for AY 2003
John H. Hoffman, Chair

The Core Curriculum Committee, which consisted of the Associate Deans for Undergraduate Education, met as needed to review applications for additions to the Core Curriculum. The Core Course requirements were revised several years ago in response to Senate Bill 148. In keeping with Senate Bill 148, courses included in UTD's Core Curriculum must demonstrate exemplary educational objectives and be executed with exemplary educational practices. The goal of each course in the Core should be to insure that students master fundamentally essential concepts and skills in a component area. For many students, a Core Course may be their only exposure to an entire academic domain. As such, Core Courses should not be narrow, particularistic or idiosyncratic. Rather, they should be introductory- or foundation-level treatments of at least a major portion of the domain encompassed by the component. See the description of each component which is appended to this report.

The School of Arts and Humanities was asked to review the list of history courses in the Core Master list. Most of the American History courses were on that list. The School submitted a revised list, deleting many courses, moving others to lower division status and redesigning the content of some. See the attachment for the current list of all core courses and the dates when they were offered. The history courses are included in this list..

In addition, the Committee approved HIST 3395, Native Americans of the Nineteenth Century, as an addition to the core.

HIST 2301, 23XX, 23YY and 2331 have been replaced by HIST 1301, 1302, 2330 and 2331 (revised).

PHIL 1301, Introduction to Philosophy, was approved as a Core course.

GEOS 3321, Geology, Resources, and Environment of Latin America, was approved.

APPROVED

AUG 27 2003

John H. Hoffman, Chair
Associate Dean & Professor

UTD Core Curriculum: 42 hours

A. Communication (6 hours)

English Rhetoric and Composition (6 hours): At least one course that requires student to learn to communicate effectively in clear and correct prose and to master several modes of writing, including descriptive, expository, narrative and self-expressive. Other courses may require students to master more specific forms of writing tailored to the professional standards in their major field of study. All courses require that students write, receive detailed feedback about, and revise at least 15 double-spaced pages.

B. Mathematics and Quantitative Methods (6 hours)

College Math (3 hours): Requires students to master the formal principles of algebra or calculus at a level higher than high school algebra II.

Quantitative Methods (3 hours): Requires students to master logical reasoning and inference; the application of mathematical concepts; statistical methods; or formal principles of algebra, calculus or advanced mathematics beyond the College Math requirement.

C. Natural Science (9 hours)

Science (9 hours): Introductory or foundations-level treatment of fields of inquiry in the natural sciences.

Laboratory Science: At least one course must have a substantial laboratory component.

D. Humanities and Fine Arts (6hours)

Visual and Performing Arts (3 hours): Introductory or foundations-level treatment of one or more of the visual or performing arts.

Humanities (3 hours): Introductory or foundations-level treatment of literature, philosophy, cultural studies, modern language or classic language.

E. Social and Behavioral Sciences (15 hours)

U.S. and Texas History (6 hours): Courses in United States and Texas history that satisfy state law.

U.S. and Texas Government and Politics (6 hours): Courses that satisfy state law requiring 6 semester hours or the equivalent in government or political science that include consideration of the Constitution of the United States and the constitutions of the states, with special emphasis on the Texas Constitution.

Social and Behavioral Science (3 hours): Introductory- or foundation-level treatments of any one or combination of topic areas dealing with the scientific inquiry of human behavior and social systems at the level of individuals, groups, societies, political systems, economic systems, management systems or cultures. Approaches topics from a scientific perspective rather than a historical, philosophical, or applications perspective.
