

Leveraging the Power of Ideas and Technology

The Institute

The Institute for Innovation & Entrepreneurship at UTD was established in late 2005 as a collaborative initiative of the schools of [Arts & Humanities](#), [Behavioral and Brain Sciences](#), [Engineering & Computer Sciences](#), [General Studies](#), [Management](#), [Natural Sciences & Mathematics](#), and [Social Sciences](#).

The Institute provides a focal point and serves as

a catalyst for programs and activities encouraging creativity and innovation across the University, engaging and supporting each of the schools in a collaborative effort to advance and pursue innovation and entrepreneurial activity in the artistic, social, scientific and commercial arenas.

The Institute's programs are designed to engage and educate faculty and students about innovation and entrepreneurship, foster collaboration, support new academic and research initiatives, including cross-disciplinary programs, and extend our reach beyond the boundaries of the University.

Through these initiatives, the Institute will help to position UTD as an institution recognized not only for research leadership, but also for the development of students who combine technical excellence in their disciplines with creative thinking, design skills, and the innovative application of new knowledge across the spectrum of human endeavor.
