OFPC Capital Improvement Program

The Capital Improvement Program (CIP) details the U. T. System's long-range plan to preserve and enhance facility assets. The CIP is a six-year projection of major repair and rehabilitation and new construction projects to be implemented and funded from component and System-wide revenue sources. Major repair and rehabilitation projects are defined in the Regents' Rules and Regulations as projects with a cost in excess of \$2,000,000. Major new construction projects are defined as projects with a cost in excess of \$1,000,000. Projects that are architecturally or historically significant are identified as major projects regardless of cost. In order to meet reporting requirements of the Texas Higher Education Coordinating Board, major and minor projects that are financed by bonds, regardless of the amount, will also be included in the CIP.
