- 8) Be able to determine if two populations have the same mean or the same proportion**
- 9) Be able to determine if several populations have the same mean**

## Grades:

Course grade is based solely on three examinations given at the end of each module described below. There is no final exam. Each exam will have two grades. The first is the raw score which will then be converted to a scaled score. The scaled scores correspond to the grades below:

- A 94 – 100
- B 87 – 93
- C 75 – 86

The final grade is the arithmetic average of the scaled scores on the three exams.

Textbook practice problems for each section are suggested below. These are designed to help you understand the techniques and concepts introduced in the course and their completion does not count toward your grade.

## Supplementary Materials:

Lecture notes for the course and EXCEL files that will be used in the lectures can be downloaded from my web site [www.utdallas.edu/~wiorkow/](http://www.utdallas.edu/~wiorkow/)

## Class Procedure:

The Monday night lectures will be divided into three parts with a 5 to seven minute break between parts.

This course assumes that you are using a computer statistical package to implement the statistical procedures. All lectures use Microsoft EXCEL for illustrative purposes.

You are responsible for the material covered in the class sessions, a small portion of which is not covered in the text book. Conversely, you are not responsible for material in the text book not covered in the lectures.
