

INSTRUCTOR INFORMATION

Name Jason Smith
Office ECSS 3.232
Office Phone 972-883-4835

Office Hours: M/W 10:00 AM – 12:00 PM or by appointment

All office hours will be held on MS Teams. Please use the link provided in eLearning and log into your Teams account. Guests will not be admitted.

Questions: All questions must be in person (class time and office hours) or posted to Piazza (<http://piazza.com/utdallas/Fall2024/cs2337>). I will not answer questions by email. My availability is

- Monday – Thursday: 9 AM – 8 PM
- Friday: 9 AM – 6 PM

I encourage all of you to participate in answering questions and contributing to discussions in Piazza.

COURSE INFORMATION

Course Number CS 2337.002
Credit Hours 3
Meeting Time Tu/Th 10:00 – 11:15 AM
Room ECSS 2.311

This class will be taught in-person. Unless recommended by UTD, there will not be an asynchronous option for this class and classes will not be recorded.

DO YOU NEED ASSISTANCE?

Problem Solving Procedure

1. Try to solve it yourself – use the internet to research the problem and try different solutions. If you can't solve it after a couple of hours move to the next level.
2. Consult with your classmates – Post your question in Piazza or the class Discord server. On Piazza, you will be able to post your questions (anonymously if you wish) about anything related to the class and get a response either from me or a classmate. Private posts (that only I can see) should be reserved for grade related questions or questions involving large snippets of code. Since there are multiple people that can answer questions, you should get a quick response allowing you to complete the tasks you are working on. If your question can't be answered there, move to the next level.
3. Visit the CSMC – If your classmates can't answer the question, check with a mentor at the CSMC (<https://csmc.utdallas.edu>). If the CSMC mentors can't answer your question, move

to the next level.

4. Visit me during office hours – If you are truly stumped, I will give you the information you need to move forward.

Help Desk: For help with issues regarding your computer, UTD maintains a walk-in help desk. Visit their Web site for details: <http://www.utdallas.edu/ir/helpdesk/>

If you need help, please make the effort to reach out. We can't help you if we don't know that you need help.

Resources:

- C++ language tutorial <http://www.cplusplus.com/files/tutorial.pdf>
- C++ reference: <http://www.cppreference.com>
- C++ tutorial <http://www.learncpp.com/>

WHAT DO I NEED FOR CLASS?

- **Zybooks (Required):**

- CS 2337 – Computer Science II
- You will pay for Zybooks when you enter the first assignment (*C++ Basics Preview 1*)
- All projects and homework assignments will be submitted through Zybooks for grading and plagiarism checking

- **C++ Compiler**

- You may use any IDE you wish as long as it supports the proper version of the compiler (gcc)
- I encourage everyone to use Online GDB (<https://www.onlinegdb.com>)
 - This will simulate the ZyBooks environment for testing.
 - It provides a clean debugger interface that will make it easier to fix bugs in your code.
 - Please review the resources in eLearning for help with using the debugger
 - **Use of a debugger is one of the most important skills you should learn in this class**
 - It's free and little set-up required.
- All projects you submit will be compiled with g++ 5.4.1 with C++11 standards. You may use any IDE that can utilize at least g++ 5.4.1. Using a newer version of C++ should not create any problems as long as the proper standard is being used.

MinGW v8.1 (Windows equivalent to g++) can be downloaded from the following link:
https://sourceforge.net/projects/mingw-w64/files/Toolchains%20targetting%20Win64/Personal%20Builds/mingw-builds/8.1.0/threads-win32/sjlj/x86_64-8.1.0-release-win32-sjlj-rt_v6-rev0.7z/download

Note the MinGW file must be opened and unpacked with 7-Zip (<https://www.7-zip.org>)

- **Note Taking Supplies** – I expect you to actively take notes. Anything discussed in class or available in the textbook is fair game on a test. Have something available to collect all the knowledge given to you (be that in physical or digital form).

- **A computer** – Obviously, you need a computer for this class. Any computer bought off the shelf is sufficient for this class. However, if you do not have a computer, the CS computer lab is open 24/7 and contains all the software you will need for this class.

I do not permit computers in class (except on in-class assignment days). Tablets that use a digital pen (no keyboards or mice) are allowed for students to take notes. Exceptions will be made for those students that have accommodations from the Office of Accessibility.

This is not a popular rule among students, but it is done so to maintain fairness in the academic environment for all students. There is no need to copy my examples in class as I will make them available to you. I would rather you focus on how we are solving the problem and how we are utilizing the C++ tools to help us.

REQUIRED COURSE INFORMATION SECTION

Course Prerequisite: A 4 or 5 on the AP Computer Science A Exam

Course Pre-/Co-requisite: currently taking CE/CS/TE 2305 or have earned a C or better in CE/CS/TE 2305 (or equivalent).

Description of Course Content: Further applications of programming techniques, introducing the fundamental concepts of data structures and algorithms. Topics include recursion, fundamental data structures (including stacks, queues, linked lists, hash tables, trees, and graphs), and algorithmic analysis. Includes comprehensive programming projects. Programming language of choice is C++.

Student Learning Outcomes: Students will be able to implement different data structures using the C++ programming language. They will be able use different data structures to program solutions to solve real problems. It will also help them understand algorithmic analysis and complexities. After successful completion of this course, you should be able to:

- Ability to implement recursive algorithms
- Ability to implement linked lists, stacks, and queues
- Ability to implement a binary tree
- Ability to use hash tables and graphs
- Ability to understand algorithmic analysis
- Ability to create a comprehensive programming project
- Ability to implement and use generics/templates

Attendance Policy: Grade deductions will be applied based on the number of classes missed for the semester as noted below:

- 1-5 absences – No deduction
- 6-10 absences – 1 letter grade drop (10 point deduction)
- 11 or more absences – automatic F in the class
- 0 absences – maybe extra credit?

TEACHING PHILOSOPHY

CS 2337 is skills-based class. Like any skill, learning requires practice and perseverance. You don't learn to play guitar by strumming a few chords you saw in a YouTube video. It takes time, energy, and dedication to the craft. It also requires a change in mindset compared to high school. Many see CS as fun and exciting because of a high school class that just taught the basics and made simple games. But CS is more about solving problems and implementing those solutions in a foreign

language. The projects you will create in this class are inspired by actual problems from the professional world. You may feel that CS is no longer “fun” once exposed to these problems.

The goal of the class is not to learn C++, but to learn the concepts associated with object-oriented programming and data structures and use those concepts to solve problems. Anyone can learn a programming language on their own, but the language is simply a collection of tools. What you do with the tools is where the learning takes place. Just because you know how to use a hammer doesn't mean you can build a house.

I teach the class using a reverse classroom approach. This means that most of the learning will happen outside of the classroom. The classroom is where we will come together to help fill in the gaps and answer questions based on your experience outside of class. You will learn the concepts by completing activities and writing code. It is expected that you will discuss and share information (not solutions) with your peers which will solidify your understanding of the material.

My goal is to prepare you for what lies ahead so you will not only be ready for your remaining classes, but also ready to transition into the professional world. It's never too early to think about the things you need for the next phase of your life after graduation. In addition to learning foundational computer science concepts, students will improve their critical thinking, communication, debugging, and time management skills. All of these are necessary to be successful not only academically, but also professionally as well as in everyday life.

WHAT I EXPECT OF EACH STUDENT

- **Ask for help at any time.** If you do not understand something or are having trouble implementing a concept, follow the problem solving procedure defined on page 1. The sooner you ask that question, the sooner you will get an answer. That answer will allow you to move forward. I want you to succeed; don't be afraid to ask questions.
- **Take responsibility for your education.** I am not the type of teacher that lectures with slides and expects students to memorize them. I teach by creating program examples in class and asking you to participate in completing the code as well as ask questions about things you don't understand. I will give challenging assignments to push you toward learning general concepts developing critical thinking and core programming skills.

Part of being a professional is learning how to teach yourself. I am going to guide you through the topics of the semester, but a significant portion of what you take with you to the next class will be things that you have learned on your own.

- **Practice time management skills.** Good time management is necessary for this class. All assignments (homework and projects) are designed to be worked on over a period of days or weeks. **I expect everyone to devote an average of at least an hour a day to this class (7-10 hours a week).** Doing this will help you to divide tasks up into chunks and work a little at a time on an assignment rather than waiting until a day or two before it is due. You will have a very difficult time succeeding in this class if you schedule to finish every assignment at the last minute.
- **Attend every class.** You are paying for an education. Don't waste your money by skipping class. I will give you everything you need to complete projects and do well on the tests. You have to be there to get the information.
- **Make mistakes!** This is how you learn. Don't be discouraged when something goes wrong. Programming takes lots of practice and mistakes will always happen. Study the mistakes you made so that you can learn from them for the future.

WHAT EACH STUDENT SHOULD EXPECT

- **A problem solving class.** This class is not a programming class. Computer science is all about problem solving. The content of this class is to teach you how to solve problems using a computer. In order to solve those problems, you will need to learn a foreign language (C++) and write solutions that the computer can interpret.
- **An open environment dedicated to learning.** I want students to feel free to voice their opinions. Oftentimes as we code in class, I will ask students what they would do in a certain situation. I want each student to feel as if he/she can speak freely and also be open for other students to discuss that idea, even if that means that some students will disagree.
- **Exams focused on syntax and application.** The programming language and how to use it are connected; each one is as important as the other. In the same way that knowing how to spell words does not make you a good writer, knowing the syntax of C++ does not mean that you know how to use those tools correctly. I will test both of these things in the exams. You will need to know the proper syntax for the programming concepts and how to use them properly. You will be expected to write code on the exam.
- **A simulated professional experience.** The projects in this class require you to exercise strategies found in "the real world". Your logic for a project may force you to learn new techniques that haven't yet been discussed in class. You will have to perform code maintenance and improve the efficiency of previously written code. These things offer a small taste of how life might be once you graduate and are given large sums of money by a company seeking your skills.
- **A deep understanding of C++ and object-oriented programming.** My goal is for you to know all the topics of CS 2337 so well that you do not need to look them up when trying to use them. I'm going to push you toward that goal. You should have peace of mind moving on in your degree plan because you will be fully prepared to tackle what the next course in the sequence will throw at you.

THE INFORMATION YOU REALLY CARE ABOUT

Grading Scale:

98-100 A+	88-89 B+	78-79 C+	68-69 D+	Below 60 F
92-97 A	82-87 B	72-77 C	62-67 D	
90-91 A-	80-81 B-	70-71 C-	60-61 D	

Grade Components:	Projects (5)	35%
	Programming Quizzes	10%
	Midterm Exam	10%
	Final Exam	15%
	Preview Homework	10%
	Review Homework	10%
	In-class Assignments	10%

General Grade Information: All grades will be available in eLearning. The Weighted Total column will give you the most accurate information concerning your grade. The weighted total is an approximation of your grade in the class based on the grades currently in eLearning.

I do not curve grades. Assignments are combined into categories so that a low grade for one

item will not destroy your grade. Extra credit may be offered at the discretion of the professor to everyone in the class. Any extra credit offered will require additional work and potentially be more complex than the scheduled assignments already. It will not be a free handout.

Grade Disputes: All grade disputes must be reported within 1 week of the grade in question being posted in eLearning. Uncontested grades will become final after 1 week and cannot be disputed later. Announcements are made after each grade is posted so please check your grades promptly and reach out to the proper person.

I am responsible for grading your exams. If you have questions regarding your exam, please contact me through a private post on Piazza.

Everything else will be graded by a TA. Please address any grading concerns you have regarding these grades with the TA. **Please make a post only to instructors in Piazza if you have a grading question.**

You are responsible for verifying that all grades in Zybooks are recorded in eLearning correctly. Once you submit your assignment in ZyBooks, remember to press the Submit to Blackboard button. Then, **check My Grades in eLearning to check that the correct grade was transferred.**

Projects: Projects will be major programming assignments that supplement recently discussed topics and will be completed in two to three weeks. Projects are intended to take approximately 15-20** hours to complete overall; this includes the design, coding and testing process. Waiting until a couple of days before the due date to start the project is a bad idea. Not only does this introduce unnecessary stress into your life, it hardly ever ends well for the student. Most students score poorly on projects that are built in less than three days.

*(** This is an average time. Your experience with problem solving in computer science may impact the time needed to complete assignments)*

Projects will be divided into milestones as you would expect to see in the professional world. The milestones for each project are as follows:

- Design (4 days)
- Core implementation (7-10 days)
- Final implementation and testing (7-10 days)

Each milestone will be graded and the total of all three milestones will contribute toward the overall grade for the project. Each milestone will have a firm deadline and failure to meet the deadlines will have a negative impact on your grade.

All coding assignments (projects and review homework) are individual endeavors and students are not to work in groups. Students are permitted (and I openly encourage students) to discuss the logic of the assignment, but **DO NOT SHOW YOUR CODE TO OTHER STUDENTS.** **When discussing logic, try to keep it general. If you give out every little piece of logic you have, there is a good chance the person you are helping will have very similar code as yours and may be flagged for being too similar.** Be careful of posting your code online in public repositories. Another student could use your code without your knowledge and could involve you in a plagiarism referral.

Students should avoid using web sites like GitHub and Chegg for help on projects. Copying code from a web site is considered plagiarism and will be treated as such. If you find code on a web site, it is highly likely another student will find it as well which may cause both submissions to be flagged for similarity. Submitting project and assignment details to web sites for outside help (e.g. Chegg) is also considered academic dishonesty by UTD.

All projects will be submitted in ZyBooks and will be compared for originality. Any projects that are approximate or identical copies will be reported to the Office of Community Standards and Conduct, and I will accept their decision in regard to the grade if they believe that academic dishonesty has occurred.

Projects will be graded on a 100 point basis. Not only will your project be graded on proper execution, but also things like efficiency, implementation and documentation. Keep in mind that you always want to write code that is easy to understand and is also easy to maintain. Fewer lines do not necessarily mean a better program. Please use comments liberally.

You are responsible for testing your project thoroughly before submission. I will not give you the exact test cases that will be used for grading before the project is due. As a computer scientist, you must be able to identify all possible input and make sure that your code produces proper output and does not crash.

Late Projects:

All project milestones will be due at 11:59 PM on the day listed in the project documentation. The final project code will be accepted up to 24 hours late with the following penalties

<= 1 hour	-5 points
1 - 3 hours	-10 points
3 - 12 hours	-25 points
12 - 24 hours	-50 points

Preview Homework: Preview homework assignments are activities based on the readings in ZyBooks. Students will read through the sections and answer basic questions about the material to illustrate they understand the general concepts.

Review Homework: Review homework assignments are generally short coding assignments that can be done in 1-2 hours and measure how well you understand the material we have covered. These assignments are typically due 1 week from the date given.

Exams: Exams will cover chapters as listed below in the tentative course schedule. Exams will primarily consist of multiple choice/answer questions. An exam should not be missed except for the most extreme. If you miss an exam, you must have documentation for the absence. A make-up exam may be given to students with valid documentation. The allowance of a make-up exam is at the sole discretion of the instructor.

All exams and quizzes will be given online in eLearning. Students are expected to take the exams and quizzes at the Testing Center on the day scheduled during the window of opportunity provided by the Testing Center. The exams will be closed book and closed notes. Quizzes will be open book and closed notes. All solutions to coding quizzes will be submitted for similarity to maintain academic integrity.

Students must have a reservation at the Testing Center to take the exams and quizzes. Reservations must be made at least 48 hours in advance. For example, if you wish to take an exam at noon on Friday, the reservation must be submitted before noon on Wednesday. Please note that availability for the exam will fill up quickly. I strongly encourage you to make all of your reservations at the beginning of the semester. I will not grant a make-up exam because a student forgot to make a reservation.

You are expected to be at the Testing Center at your scheduled time. You will not be admitted into the Testing Center if you are more than 15 minutes late. Make-up exams will not be given if you are late to the exam unless there is an emergency situation.

Assignment Due Date Exceptions: In general, assignments are not accepted late except for the final submission of a project (see late penalties above). However, I know that life has a way of bringing the unexpected at the most inopportune times. If you have an exceptional life situation (personally or academically) that is creating difficulty for you to meet the given due date of an assignment, I will work with you to give an extension as long as you contact me **at least 24 hours before the due date.**

ARE WE THERE YET?

All dates are subject to change at the discretion of the instructor

Date	Topic	Chapter
8/20 8/22	Basic Elements of C++ I/O and Control Structures User-Defined Functions Arrays Strings	Chapters 3 – 10
8/26	Last day to add/swap classes	
8/27	Recursion	Chapter 11
8/29	Object-oriented Design Structs Classes	Chapters 12-13
9/3	Pointers Dynamic Memory Allocation	Chapter 14
9/4	Last day to drop without a "W"	
9/5	Linked Lists	Chapter 16
9/6	Programming Quiz #1	
9/10	Linked Lists	Chapter 16
9/12	Overloaded Operators	Chapter 17
9/17	Templates Vectors	Chapter 18
9/19	In-Class Assignment #1	
9/24	Inheritance Polymorphism	Chapter 20
9/26	Polymorphism Dynamic Casting	
9/27	Programming Quiz #2	
10/1	Virtual Functions Abstract Classes	Chapter 20
10/3	In-Class Assignment #2	
10/4	Mid-Term Exam (C++ and Linked List)	
10/8	Stacks Queues	Chapter 21
10/10	In-Class Assignment #3	

10/15	Binary Search Trees	Chapter 22
10/17	Binary Search Trees	
10/22	Binary Search Trees	
10/24	In-Class Assignment #4	
10/29	Graphs	Chapter 24
10/31	Graphs	
11/5	Last day to drop Graphs/Hashing	Chapter 24/26
11/7	In-Class Assignment #5	
11/12	Hashing	Chapter 26
11/14	Hashing	
11/19	In-Class Assignment #6	
11/21	Measuring Algorithm Efficiency Big-O Notation	Chapter 27
11/22	Programming Quiz #3	
11/25 - 11/29	FALL BREAK	
12/3	Algorithm Efficiency of Data Structures	Chapter 28
12/5	Sorting Algorithms	
12/12	Final Exam (Data Structures)	

Assignment Calendar

All assignments due by 11:59 on the due date listed unless otherwise noted

All dates are subject to change at the discretion of the instructor.

Please refer to eLearning for any updates.

All submissions are made using the provided links in eLearning

Assignment	Post Date	Due Date
C++ Basics Preview 1 (Variables, Streams, Branches, Loops)	8/20	8/25
Project Zero Java Implementation	8/22	8/28
C++ Basics Preview 2 (Functions, Recursion, Arrays, Strings)	8/20	8/31
Structs, Classes, and Pointers Preview	8/20	9/3
Project Zero C++ Implementation	8/22	9/4
Programming Quiz #1	9/6	9/6
Linked Lists Preview	8/20	9/7
Project 1 Pseudocode	9/5	9/9
