Math 2420.701.24F: Differential Equations with Applications

Fall 2024

Course section: Math 2420.001, Tues & Thurs : 8.30 - 9:45am, JSOM 12.202
Instructor: Dr. Jigarkumar Patel
Office: FO 2.410E
Office hours: TR 10:00am-11:15am
E-mail: jigarkumar.patel@utdallas.edu

Course section: Math 2420.002, Tues & Thurs : 11.30 - 12:45am, FN 2.214
Instructor: Dr. Jigarkumar Patel
Office: FO 2.410E
Office hours: TR 10:00am-11:15am
E-mail: jigarkumar.patel@utdallas.edu

Course section: Math 2420.003, Tues & Thurs : 2:30 - 3:45pm FN 2.214
Instructor: Dr. Oleg Makarenkov
Office: FO 2.610C
Office hours: Tuesday 1.00 - 2.00pm, or by appointment
E-mail: makarenkov@utdallas.edu

Course section: Math 2420.004, Tues & Thurs : 1:00 - 2:15pm FN 2.214
Instructor: Dr. Kirill Lazebnik
Office: FO 2.604E
Office hours: Tuesday 12.00 - 1.00pm, or by appointment
E-mail: kirill.lazebnik@utdallas.edu

Course section: Math 2420.005, Tues & Thurs : 4:00 - 5:15pm, GR 2.530
Instructor: Dr. Dmitry Rachinskiy
Office: FO 2.602D
Office hours: Thursday 1.00-2.00pm, or by appointment
E-mail: dmitry.rachinskiy@utdallas.edu

Problem Sections:

Section	Day	Time	Room	TA's Name	Contact
2420.301	M	10:00 - 11:50am	SLC 2.203	Sarkar, Soham	sxs210586
2420.302	F	3:00pm - 4:50pm	SCI 3.260	Babbitt, Matthew	mwb180002
2420.303	F	8:00am - 9:50am	SLC 1.202	Daniel, David	dod220001
2420.304	M	8:00am - 9:50am	SLC 3.102	Holan, Kevin	kjh170030
2420.306	F	10:00am - 11:50am	SLC 2.202	Hoang, Ngoc	nth220002
2420.307	M	1:00pm - 2:50pm	SLC 1.202	Sarkar, Soham	sxs210586
2420.308	F	1:00pm - 2:50pm	SLC 2.203	Daniel, David	dod220001
2420.309	M	10:00am - 11:50am	SLC 2.202	Holan, Kevin	kjh170030
2420.310	F	1:00pm - 2:50pm	SLC 2.202	Hoang, Ngoc	nth220002

Students MUST be registered for the exam section: Math 2420.701.

Students MUST be registered for ONE of these problem sections: Math 2420.301, Math 2420.302, Math 2420.303, Math 2420.304, Math 2420.306, Math 2420.307, Math 2420.308, Math 2420.309, Math 2420.310

Textbook

William E. Boyce and Richard C. DiPrima, *Elementary differential equations and boundary value problems*, John Wiley & Sons, any edition.

Course description

This is an introductory course to the theory of ordinary differential equations (ODEs). Topics to be covered include: first order differential equations, second order linear equations, Laplace transform techniques, systems of first order linear equations, nonlinear systems, power series solutions.

Student Learning Objectives

1. Students will be able to identify different methods of solving differential equations and apply them to obtain solutions for various classes of differential equations.

2. Students will be able to apply their knowledge of differential equations to construct and analyze models arising in applications in mathematics, physics, engineering, population dynamics.

3. Students will be able to perform quantitative and qualitative analysis of problems described by differential equations.

Assignments, quizzes and exams

Assignments: There will be weekly assignments. Those are for practice, NOT for grade.
Quizzes: There will be a weekly quiz during the problem session organized and marked by the teaching assistant.
Exams: There will be three common examinations. All sections take examinations together. Textbooks, notes, calculators or other electronic devises won't be allowed during examination. The midterm and final examinations have been scheduled as follows:

	Week day	**Time**	**Room**	**Date**
Exam I	Tuesday	7:00pm-9:00pm	ECSW 1.315, HH 2.402	2024-09-24
Exam II	Tuesday	7:00pm-9:00pm	ECSW 1.315, HH 2.402	2024-10-29
Final Exam	Saturday	7:00pm-9:45pm	ECSW 1.315, HH 2.402	2024-12-07

A particular examination room, either ECSW 1.315 or HH 2.402, will be assigned and communicated to you shortly before the exams.

Students with **documented time accommodations** may be advised to take the exams on the **same dates** in FO2.610F with their Instructor's approval.

For further info see also UTD Course Book: https://coursebook.utdallas.edu/

Grading policy

Weekly Quizzes in Problem Sessions: 35%
Midterm Exam I: 20%
Midterm Exam II: 20%
Final Exam: 25%.

Important Dates

Last day for regular registration: Aug. 15
Classes begin: Aug. 19
End of late registration and last day to add/swap: Aug. 26
University closed: Labor Day: Sept. 2
Census day; Last day to drop without a W: Sept. 4
Withdrawal period ends: Nov. 5
No classes: Fall break: Nov. 25-27
University closed: Thanksgiving holidays: Nov. 28-Dec. 1
Last day of classes: Dec. 5
Reading day: Dec. 6
Final exams: Dec. 7-13

Detailed course description

1. Introduction: Some basic examples of models, classification of differential equation, standard forms, initial value problems. Few remarks on applications. First order ordinary differential equations (ODEs): existence and uniqueness results. Higher order ODEs.

2. Separable equations, homogeneous equations: techniques of obtaining solutions. (Review of techniques of integration is recommended).

3. First order linear ODEs and Bernoulli's equation. Exact equations and equations which can be made exact using integrating factors. (Review of gradient vector fields recommended).

4. Second order linear ODEs: general theory, homogeneous and non-homogeneous equations, Wronskian and linear independence of solutions. (Review of linear algebra: linear independence and basis recommended).

5. Reduction of order for second order linear ODEs (homogeneous and non-homogeneous).

6. Second order linear homogeneous ODEs with constant coefficients: characteristic equation, real characteristic roots, complex characteristic roots, repeated root. Remarks about higher order linear ODEs with constant coefficients. (Review of complex numbers and complex exponential function recommended).

7. Second order linear nonhomogeneous ODEs: methods of undetermined coefficients and variation of parameters.

8. Euler equation.

9. Laplace transform: definition and its properties, derivation of table of Laplace transforms. Laplace transforms of discontinue functions and impulse functions. Solving linear nonhomogeneous ODEs (with constant coefficients) using Laplace transforms. Examples. (Review of improper integrals and criteria for their convergence recommended).

10. Second order systems of linear ODEs: Classification of singular points, phase portrait. (Review of linear algebra, eigenvalues and eigenvectors recommended).

11. Introduction to nonlinear systems: Equilibrium solutions, linearization, examples from mechanics, electricity and population dynamics.

12. Review of power series: analytic functions, domains of convergence, tests for convergence, basic analytic functions and their power series. Second order linear ODEs with non-constant coefficients: power series solutions. (Review of calculus related to infinite series recommended).
